RE: MOSQUITO LARVICIDE TREATMENT IN CATCH BASINS

Hancock Public Health will be conducting routine mosquito larvicide treatment of storm sewer catch basins beginning June 13th, 2022. The catch basin treatments will be conducted intermittently through the summer to targeted areas. These treatments will involve Hancock Public Health staff members placing a tablet or similar product in catch basins. This treatment will prevent mosquito larvae from hatching and becoming adult mosquitoes within the catch basins. Please notify Hancock Public Health of any plans to pump catch basins in your area to ensure proper catch basin treatments.

Please forward this information to any of your staff that this may impact.

If you have any questions, please contact this department, Mondays between 9:00am-4:30pm, Tuesday through Friday, between 8:00am-4:30pm, at (419) 424-7870 or via email at environmental@hancockph.com.

Sincerely,

Karim Baroudi MPH, RS, REHS
Health Commissioner
